Dallas, TX – The Covenant Consortium (TCC), a global security consulting firm, announced today that it will begin offering a full suite of biometric facial recognition products for the commercial and government marketplace. TCC provides the only multi-dimensional biometric facial recognition technology delivering the most reliable and accurate biometric security solution available.

The technology developed by Acsys Biometrics is currently being used in some of the most secure government and commercial locations in North America.

VeraPort is a non-intrusive biometric authentication solution. It can be implemented as a standalone or to enhance standard card entry systems that use magnetic strip, proximity or smart card technologies. VeraPort is the only biometric solution that integrates with video surveillance systems. VeraPort is installed at secure entry and egress points in a facility ensuring 100% validation that the person using a card entry system is the person assigned to the card. VeraPort supports wireless technologies enabling security teams to receive a live digital image of a violator via a wireless PDA device.

“We now have the full capability to help our clients tailor their security systems infrastructure to provide complete Identity Management verification and validation” said Bill Montgomery, President & CEO of TCC. TCC’s biometric solution integrates with corporate and government networks enabling organizations such as law enforcement agencies to integrate with various offender networks.

VeraPort also is instrumental in helping companies meet the requirements of Section 404 of Sarbanes-Oxley Act, Health Insurance Portability and Accountability Act (HIPAA) and other federal regulatory requirements. These regulatory requirements direct enhanced security layers for identifying users and controlling their access to sensitive areas and information. VeraPort enables organizations to implement a comprehensive identity management solution that enables them to easily manage all identities and access rights for their users. This allows an organization to reduce its security administration, management requirements and costs while significantly enhancing the level of security operations.

### **About The Covenant Consortium, LLC.**

The Covenant Consortium (TCC) offers the most complete and proven Facial Recognition Suite commercially available. With an end-to-end solution which encompasses access control to both secure locations and secure information, time and attendance functions, and complete risk management, our Facial Recognition Suite allows organizations to implement a comprehensive Identity Management solution and share this information throughout multiple locations as well as providing automated reporting of multiple risk.

TCC a Historically Underutilized Business registered in the State of Texas. TCC has also pending an application for SBA 8(a) Certification. For more information on TCC and its security solutions, please call 972-713-9200 or visit [www.tcc.us.com](http://www.tcc.us.com).
